Dr. John C. Cutler
Apartado 383
Guatemala City, Guatemala

Dear John:

We have your note in regard to the publication of the San Jose study by Doctor Funes. We have reviewed the report which was on file here and which was prepared for the Washington meeting. There are several typographical errors and one mistake in arithmetic which I am sure will be corrected in the final paper. The further approval of the Service would be necessary in the event the paper is to be a Service-sponsored publication.

We have always felt that it would be expedient to do everything possible to push Funes to the fore as the leading Central American syphilologist. I am sure that this will be worthwhile in the event of the broad program of venereal disease control work being developed in Central America.

Sincerely,

J. F. Mahoney
Medical Director
USPHS
