New manuscript submission (74089-RG-1)

Add new author

- Include all authors listed on the title page of the submission. **Failure to do so will result in a returned and delayed submission.**
- Add an author by searching on the person's name or full e-mail address — the author might already be in our database. If the author is in our database but has outdated contact information, you will be able to update this information.
- If the author is not in our database, you will be prompted to supply full contact information for the author you wish add.
- If an author cannot be contacted by e-mail, [please contact us](#) so that we may add this author on your behalf.

The JCI strives to provide authors with fair and equitable rights to their contributions in return for assigning copyright of their work to the JCI's publisher and owner, the American Society for Clinical Investigation (ASCI).

- **Personal/nonprofit use and reproduction is allowed under this agreement.** Authors retain rights to present the work without prior permission in original, revised, adapted, or derivative form, provided that all such use is for personal or nonprofit (and noncommercial) benefit, is consistent with any employment agreement, and references the original publication citation. Examples: reproduction in nonprofit publications; lecture display (slides, overheads, or digitized media); hosting on personal or curriculum vitae-oriented websites; and inclusion in institutional and/or funding-body repositories.
- **Commercial use and reproduction is restricted under this agreement.** Use by commercial entities requires prior permission from the ASCI. Examples: inclusion in databases maintained by commercial entities; reproduction in any form, print or otherwise, by commercial entities; and inclusion in coursepacks that are offered for sale by commercial entities.

The JCI requires that each author, in order to protect the integrity of the published work, read and affirm the following:

- **Authorship responsibility.** I certify that I have participated sufficiently in the conception and design of this work and the analysis of the data (where applicable and within my area of expertise), or the writing of the manuscript, and to take public responsibility for it. I warrant that my work is original and scientifically accurate, that it is not defamatory, does not invade any right of privacy, and does not infringe on any proprietary right or copyright. I agree to indemnify and hold the ASCI and the JCI harmless against any claim to the contrary. I believe the manuscript represents valid work. I have reviewed **this** version of the manuscript and **approve it**. To my knowledge, neither this manuscript nor one with substantially similar content under my authorship has been published or is being considered for publication elsewhere, except as described in an attached letter. I attest that I shall produce the data on which the manuscript is based for examination by the editors or their assignees should they request it. **I have read and agreed to JCI's instructions to authors and editorial policies and practices.** Finally, I certify that I have obtained written permission from all persons named in unpublished observations or the acknowledgments.
- **Financial disclosure.** I certify that I have read the **JCI Conflict of Interest policy** and that potential conflicts of interest were communicated to the editors when the manuscript was originally submitted for review. Any additional potential conflicts not disclosed at that time should be communicated by e-mail to production@the-jci.org. I understand that such affiliation(s) may be published as a footnote to the manuscript. All financial research or project support is identified in an acknowledgment in the manuscript.

Respond by clicking on one of the following options:

YES: I affirm my authorship and will transfer or otherwise convey all copyright ownership of the accepted version of the manuscript to the ASCI.

YES: I affirm my authorship but because I was an employee of the US Government when this work was conducted and prepared for publication, I am unable to transfer copyright ownership.

NO: I cannot affirm my authorship and will not transfer copyright.
